

SMRIDHI BHAT

smridhibhat59@gmail.com | +1 (352) 871-9538 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Full Stack Developer with 3+ years of experience building scalable distributed applications. Proficient with modern JavaScript frameworks and backend development with Spring Boot and NodeJS. Passionate about optimizing performance, leading cross-functional teams, and delivering innovative software solutions.

WORK EXPERIENCE

Software Engineer | Career Soft Solutions July 2024 – Present

- Designed and implemented CRM module using Java, integrating customer data management and sales tracking. Leveraged **Netty** for **non-blocking I/O** and **Java Concurrency Utilities** for **multi-threaded** programming to deliver real-time notifications and faster data processing, improving customer relationships and boosting satisfaction by **25%**.
- Integrated **WebSockets** and **APIs** to deliver real-time updates to the CRM module's frontend using **ReactJS** and **JavaScript**, improving user engagement and reducing data refresh delays by **40%**.

Research Assistant | University of Florida Aug 2023 – July 2024

- Designed interactive web pages with **React** framework for the Embodied Intelligence Lab's website that predicts emotions based on texts.
- Implemented **OAuth2**, **SSO**, and **JWT**-based authentication mechanisms to ensure secure API access for the website.

Software Engineer | Honeywell Jan 2018 – Aug 2020

- Developed responsive customer and admin webpages for the building portfolio website for the Honeywell Forge team, integrating industrial data for actionable insights, and predictive maintenance leveraging **React**, **JS**, and **REST APIs**.
- Built fault-tolerant, event-driven architectures using **Spring Boot**, integrating with AWS **DynamoDB Streams** ensuring high availability and seamless performance for the website, which improved system uptime by **36%**.
- Optimized system reliability by implementing message deduplication in **Apache Kafka**, reducing redundant processing by **15%**.
- Leveraged **Docker** containers and deployed the building portfolio website on **AWS** cloud using **Jenkins** CI/CD pipelines, reducing deployment time and shrinking latency from **2.0** seconds to **0.5** milliseconds.

TECHNICAL SKILLS

Frontend Technologies: JavaScript (ES6+), React, HTML5, CSS3, Bootstrap

Backend Technologies: Java, Python, Spring Boot, Node.js, Hibernate, Akka.net, Java Concurrency Utilities

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Cloud Platforms: AWS (Lambda, S3, DynamoDB, CloudFormation, SQS, CloudWatch)

DevOps & Tools: Docker, Kubernetes, Jenkins, Git, Apache Kafka, Redis, Netty

Testing Frameworks: JUnit, Jest, Mockito, Cypress

Operating Systems: Windows, Linux, macOS

EDUCATION

Master of Science in Computer Science

University of Florida (GPA:3.7)

Aug 2021 – May 2023

Gainesville, Florida

ACADEMIC PROJECTS

Gossip Protocol | *F#, Akka.net, Failure Detection*

- Implemented a decentralized mechanism that transports messages to all the nodes in the network with different network topologies like line, full, 2D and 3D resulting in reduction of the **fault tolerance** of the system by **90%**.

Distributed Hash Table | *F#, Akka.net, Consistent Hashing*

- Implemented Chord Protocol to build a distributed hash table using the Actor model. Achieved **~95%** accuracy in node lookups for **1000+** nodes in distributed system using **consistent hashing**.

Peer-to-peer file sharing software | *Java Socket Programming, Multithreading*

- Developed a peer-to-peer file sharing application using **Java Web Sockets** across multiple nodes. Addressed the fairness problem by implementing a **choke and unchoke** mechanism that minimized network abuse by **70%**.

Slack Clone | *React.js, Redux, Firebase*

- Developed a web application with features similar to Slack, allowing users to create channels, send messages through channels and enable sign-in with existing Google accounts using **Google-auth** with React-Firebase.
